The development of algae as a source of alternative proteins

Dr. Miller Tran co-founded Triton, an algae biotechnology company, in April of 2013. Currently serving as Triton's Vice President of Research and Development, he leads the pioneering efforts to transform microalgae into future food and sustainable ingredients.

Dr. Tran received his doctorate in Biology from the University of California, San Diego under the guidance of Dr. Stephen P. Mayfield. There he developed genetic tools and scale-up strategies that would facilitate the production of the next generation of bio-products. Dr. Tran has published 20 peer reviewed articles and has been granted dozens of patents worldwide.
