Physics Peer Mentor Annika Feng

Hi all!

My name is Annika Feng, and I am super excited to be a PHYS195 Peer Mentor starting in 2023.

I am a current physics major hoping to transfer to a four-year university with an astrophysics degree. My uncle is a theoretical physicist and he inspired me to take up the field after hearing about his research and exciting new discoveries.

I graduated from high school in spring 2021 after years of chronic fatigue and took a year off to recover and work before coming to Mesa last fall. I tutored peers back in high school, mostly math, and I'm looking forward to helping other students at the college level.

I'm a San Diego native, I love to bake, and I am obsessed with candles. A fun fact about me is that I won a baton twirling competition when I was in kindergarten!
