## Physics Peer Mentor Jelani Morton

---

Hello! I hope that when you're finished reading this you will have an amazing day. My name is Jelani and I'm studying to pursue a career in neuroscience. I'm honored that you would take the time to want to get know me.

Right now, I have a dream of pursuing neuroscience to delve into the aspects of the soul and maybe find a new science of self. The human mind has always fascinated me, both as someone who has experienced life with one, and as an observer of those who also have one.

My real passion for physics stems from my desire to change the reality around me through the medium of science. Just the thought that someone can dedicate themselves to finding out how to put a man or woman on the moon through math and physics alone, inspires me to aspire to doing something just like that.

Right now, I'm planning to transfer out of MESA, however I do not have a definite location for the next chapter of my life. As of this moment right now, all my focus will be on helping you on your road to becoming the best version of yourself!

Super Duper Fun Fact: If you ask me a random question, I will not only dedicate myself to answering it thoughtfully, but I will also ask you one of my own!

I genuinely look forward to meeting with you, please don't ever hesitate to ask for help!
